

Conference App

Infrastructure & Running Cost Estimate

All amounts in Nigerian Naira (₦)

Basis of estimate

Figures below are planning estimates for hosting and running the conference app for its first year, covering the build-up period and the conference itself. Based on ~2,000 delegates on Android and iOS. Currency converted at ₦1,600 = US\$1. Cloud services are billed monthly and scale with usage; free tiers are noted where applicable.

A. One-time setup costs (Year 1)

Item	Basis	Amount
Google Play Developer account	One-time registration (US\$25)	₦40,000
Apple Developer Program	Annual, required for iOS App Store (US\$99)	₦158,400
Domain name (.com.ng)	Registration, first year	₦25,000
Backend setup & security hardening	Database, auth & role configuration	₦150,000
Setup subtotal		₦373,400

B. Monthly running costs (while live)

Item	Basis	Amount
Supabase Pro (backend)	Managed backend platform (US\$25/mo)	₦40,000
Usage & bandwidth buffer	Headroom for peak conference traffic	₦40,000
In-app AI assistant	Chatbot API usage (event month)	₦64,000
Push notifications	Firebase Cloud Messaging	Free tier
Transactional email	Sign-in & notification emails	Free tier
Monthly subtotal		₦144,000

Conference App

Infrastructure & Running Cost Estimate

All amounts in Nigerian Naira (₦)

C. Optional / variable services

Item	Basis	Amount
SMS OTP verification	Phone sign-in — per 10,000 messages	₦45,000
Additional AI usage	If chatbot traffic is very high	₦30,000
Apple Developer renewal	From Year 2 onward (annual)	₦158,400
Domain renewal	Annual, from Year 2	₦25,000

D. Estimated Year-1 total

One-time setup	₦373,400
Running cost (6 active months x ₦144,000)	₦864,000
Contingency (10%)	₦123,740

Estimated Year-1 total	₦1,361,140
-------------------------------	-------------------

Steady-state (off-peak) running cost

Outside the conference period the backend can be scaled down to roughly ₦40,000 per month, since the AI assistant and traffic buffer are only needed during the live event.

Notes

- These are running / infrastructure costs only and do not include app design or software development.
- Cloud services (Supabase, AI, SMS) are pay-as-you-go and may be higher or lower than shown, depending on real delegate numbers and usage.
- Apple's fee applies only if the app is published to the iOS App Store; an Android-only rollout removes ₦158,400 from Year 1.
- Exchange rate (₦1,600/US\$1) as at July 2026; USD-billed items will move with the rate.
